PENDING CLAIMS AS AMENDED

Please amend the claims as follows:

(currently amended) A method comprising the steps of:
using an antenna beam pattern to send a communication signal to a user;
determining a statistic using a control signal from said user;
utilizing said statistic to narrow said antenna beam pattern and to direct said antenna
beam pattern to relative to a position of said user.

- 2. (original) The method of claim 1 further comprising storing said antenna beam pattern after said utilizing step.
- 3. (original) The method of claim 1 wherein said utilizing step comprises using a dithering algorithm to optimize said antenna beam pattern.
- 4. (original) The method of claim 1 wherein said control signal is a power control signal.
- 5. (original) The method of claim 1 wherein said control signal is a data rate control signal.
- 6. (original) The method of claim 1 wherein said statistic is an average of said control signal over a specified interval of time.
- 7. (original) The method of claim 1 wherein said statistic is a running average of said control signal.

2

8. (original) The method of claim 1 wherein said statistic is a weighted average of

said control signal.

9. (original) The method of claim 1 wherein said antenna beam pattern is formed using an adaptive antenna array.

10. (original) The method of claim 1 wherein said communication signal is sent over a forward link of a wireless communication system.

11. (original) The method of claim 10 wherein said wireless communication system is a wideband code division multiple access communication system.

12. (currently amended) A system comprising:

a control signal monitoring module configured to access a control signal from a user;

a signal statistic computation module configured to determine a statistic from a sequence of monitored signals output by said signal monitoring module;

an antenna beam pattern optimizing module configured to utilize said statistic to narrow an antenna beam pattern to be directed to relative to a position of said user.

- 13. (original) The system of claim 12 further comprising an adaptive antenna array module configured to output and direct said antenna beam pattern to said user.
- 14. (original) The system of claim 12 further comprising an antenna beam pattern storing module configured to store said antenna beam pattern.
- 15. (original) The system of claim 12 wherein said antenna beam pattern optimizing module uses a dithering algorithm to optimize said antenna beam pattern.
- 16. (original) The system of claim 12 wherein said control signal is a power control signal.

Customer No.: 23696

- 17. (original) The system of claim 12 wherein said control signal is a data rate control signal.
- 18. (original) The system of claim 12 wherein said statistic is an average of said sequence of monitored signals over a specified interval of time.
- 19. (original) The system of claim 12 wherein said statistic is a running average of said sequence of monitored signals.
- 20. (original) The system of claim 12 wherein said statistic is a weighted average of said sequence of monitored signals.
- 21. (original) The system of claim 12 wherein said antenna beam pattern is used to send a communication signal to said user.
- 22. (original) The system of claim 21 wherein said communication signal is sent over a forward link of a wireless communication system.
- 23. (original) The system of claim 22 wherein said wireless communication system is a wideband code division multiple access communication system.
